SKILLS & COMPETENCIES

- **Analytics & Tools:** SQL (joins, CTEs, window functions), Python (pandas, scikit-learn, matplotlib, seaborn), Tableau (LOD expressions, dashboard actions), Excel (PivotTables, Power Query), Power BI
- **Competencies:** Data Cleaning, Exploratory Data Analysis, KPI Development, Dashboard Design, Data Modeling, Stakeholder Reporting, Process Documentation

PROJECTS

E-Commerce Sales Analysis (SQL + Tableau)

[Github](#) | [Dashboard](#)

Analyzed 539K+ e-commerce transactions across 38 countries to uncover revenue patterns and operational risks.

- Identified a 99% revenue surge from August–November using SQL time-series queries (CTEs, window functions), informing Q4 inventory and marketing timing strategies
- Profiled top 10 high-value customers including one generating \$280K annually to surface concentration risk and recommend a wholesale account retention program
- Built an interactive Tableau dashboard with drill-downs by region, customer segment, and product category, delivering four strategic recommendations for inventory planning and international expansion into Germany and France

Telco Customer Churn Analysis (Python + scikit-learn)

[Github](#)

Analyzed 7,000+ telecom customer records to identify churn drivers and build a predictive model for at-risk customer segmentation.

- Identified contract type, tenure, and monthly charges as top churn predictors. Month-to-month customers churned at 43% versus 3% for two-year contracts, directly informing retention strategy
- Delivered four data-backed business recommendations including a contract upgrade campaign projected to prevent 168+ churns per cycle and an auto-pay incentive targeting the highest-risk payment segment

USA Jobs Market Tracker (React + REST API)

[Dashboard](#)

Live React dashboard consuming the USAJobs API to visualize federal hiring trends across thousands of active postings.

- Aggregated and visualized federal hiring data across thousands of live postings, surfacing geographic demand concentration, salary range benchmarks by role, and posting volume trends to support job market analysis
- Enabled granular labor market research through dynamic keyword, location, and date filtering — allowing users to identify hiring surges, top-paying agencies, and in-demand roles across the full federal landscape

WORK EXPERIENCE

The Ohio State University

Jan. 2022 – Jan. 2023

Student Analyst, IT & Systems Support

Columbus, OH

- Tracked and analyzed 20–30 technical cases per shift across a 150,000+ user system, maintaining structured KPI logs and escalation records
- Identified recurring system issues through ticket data analysis and communicated findings cross-functionally to IT staff and department leads to support process improvements

Forno Kitchen + Bar

Aug. 2023 – Mar. 2026

Server

Columbus, OH

- Translated real-time operational metrics such as table pacing, order volume, and revenue targets into on-the-fly service decisions, developing analytical thinking applicable to business operations roles

EDUCATION

The Ohio State University

Dec. 2023

Bachelor of Business Administration, Management Information Systems

Columbus, OH
